Subject Index

1.54 μm luminescence 156
$^1S_0$ 176
5d–4f and 4f–4f luminescence 638
II–VI compounds 235

Ablation 96
ABO_3 perovskites 537, 657
Absorption 597
Acid–base 682
Afterglow 590
Antibunching 402
Apatites 426
Atomic layer epitaxy 455
Auger deexcitation 156
Azobenzene 722

Bacteriophage 469
Ballistic effect 551
Band structure 597
Bichromophoric molecules 278
Biomimic sensor 774
Breather 722
Broadband emission 797
Broadband semiconductors 125

Carrier dynamics 138
Cascade emission 344
Cascade radiative transitions 638
Cathodoluminescence 173, 455, 782
Cathodoluminescence-like emission 291
Cavity polariton 232
Charge transfer 131, 635
Chemical imaging 194
Chirped pulse 125
Chirped pulses 131
Chlorosomes 60, 802
Circular dichroism 60
Coherent control 669
Coherent excitation of carriers 125
Coherent oscillation 21
Colluvium and alluvium sediments 566
Color centers 77, 543, 815
Colored noise 802
Concentration quenching processes 417
Confocal microscopy 201
Correlation experiments 67
Cross-section 101
Crystal fields 239, 283
Crystal growth 395
Crystalline solids 510

d^5 ions 235
Decay kinetics 618, 651, 791
Defect drift in electric field 733
Defects 543
Demineralization 96
Diamond 785
Dielectric constant 487
Dielectric permittivity 7
Diffusion assisted reaction 682
Diode pumping 715
Disorder 13
DNA 469
Doping 651
Drug 194
Dye molecules 189, 295

Electric charges 782
Electrical transport 492
Electroluminescence 173
Electromodulation 629
Electron–hole exchange 414
Electronic coherence 189
Electronic energy transfer 278
Electronic structure 688
Electron–phonon coupling 451
Emission 77
Emission of organic compounds 408
Energy levels 318
Energy migration 727
Energy relaxation 295
Energy storage 815
Energy transfer 34, 48, 112, 144, 373, 525, 532, 694, 737, 744
Energy transfer processes 72
Energy transport 802
EPR 575
Er:YAG laser 96
Europium complexes luminescence 243
Excited state absorption 211
Excited-state dynamics 476

Exciton 27, 663
Exciton annihilation 532
Exciton confinement 414
Exciton polarons 220, 363
Exciton–phonon interaction 604
Excitons 307, 434, 451
Exiton luminescence 543

Fast intrinsic luminescence 44
f–d Transitions 151
Feldspar 562, 566
Femtosecond 669
Femtosecond spectroscopy 21
Finite-size aggregates 532
Flat band 226
Fluorescence 91, 119, 194, 295
Fluoride crystals 638
Fluoride host lattice 380
Fluorides 176
Four-wave mixing 189
Free-electron laser 85
Free-exciton emission 604
Frenkel excitons 802

Glass matrix 414, 451
Glasses 91, 101, 106, 301, 755, 762
Green's function 232
Green-to-near-IR luminescence 715

H^- localised modes 169
Ham effect 81
Heterojunction 291
HFEPR 369
High-frequency discharge 712
High pressure 571
High-pressure spectroscopy 220, 699
Hole-burning and fluorescence line-narrowing spectroscopy 363
Hopping time 532
Hot emission 438
Hyperfine 166

Image screens 807
Imprinted polymer 774
Impurities 235
Inhomogeneous broadening 301
Inner-shell excitation 307
Insulators 782
Integrated optics 201
Integration of mechanisms 291
Intensity simulations 166
Intramolecular electron and energy transfer 267
Intramolecular proton transfer 261
Intrinsic optical bistability 206
Ion implantation 785
Ionizing radiation 464
Isomers 119

J-aggregates 13, 27
Jahn–Teller effect 81

Kagome lattice 226
Kyanite 575

Lanthanide 144, 373
Lanthanides 211
Laser 91, 101, 106, 357
Laser crystals 318, 694
Laser materials 72, 106
Laser-induced breakdown spectroscopy 408
Laser-induced fluorescence 273
Leakage 232
Light shifters 119
Linear dichroism 60
Longitudinal optical (LO) phonon-mediated relaxation 623
Luminescence decay 510
Luminescence excitation 744
Luminescent particle 445
Luminescent properties 426

Metal oxides 38
Microscopy 27
Micro-structuring 797
Microwave echo 54
Molecular aggregates 60
Molecular logic elements 267
Multicolor quantum light source 402

Nanocrystals 138, 182, 327, 338, 414, 451, 476
Nanoparticles 445, 768
Near-band-edge emission 287
Nephelauxetic effect 571
Nitridation 519
Non-classical states of light 67
Non-equivalent centres 216
Non-radiative transitions 283
Nonlinear spectroscopy 189

Optical absorption 768, 807
Optical coherence tomography 797
Optical dating 562
Optical energy levels 235
Optical Kerr effect 669
Optical Kerr gate 21
Optical materials 699
Optical properties 248, 438
Optical spectroscopy 239
Optically stimulated luminescence dating 566
Organic polycrystals 464

Pair-state 182
Perovskite 386
Persistent phosphors 34
Phonon anharmonicity 54

Phonon modes 7
Phosphors 445, 586, 727
Phosphosilicates 426
Photoacoustic spectroscopy 357
Photoactive yellow protein 21
Photoconductivity 333
Photoinduced electric dipole 629
Photoionization 333
Photoluminescence 85, 138, 333, 492, 519, 557, 644, 705, 712, 733, 768, 785, 807
Photoluminescence excitation 551, 705
Photon cascade emission 176
Photon multiplication 38
Photonic crystal 476
Photostimulated luminescence 807
Photosynthesis 802
Photosynthetic light-harvesting 220, 363
Photosystem II particles 313
Phototautomerization 261
Picosecond fluorescence 278
PL 819
Point defects 575
Polariton 27
Polariton–polariton scattering 434
Polyacetylene 722
Porous silicon 492, 551
Probability theory 182
Protein 96
Proton transfer 676
ps lifetimes 169
Pulsed X-ray excitation 287
Pump–probe spectroscopy 13

Quantum confinement 492, 557
Quantum dots 1, 402, 629
Quantum efficiency 344
Quantum paraelectric 54
Quantum-size effect 434, 751
Quantum-structured materials 476
Quantum wells 751
Quartz 562

Radiation dosimeter 614
Radiative lifetime 417
Radical-beam gettering epitaxy 712
Radioluminescence 464
Rare earth ions 216
Rare-earth oxides 445
Rare-earth spectroscopy 395
Rare earths 72, 85, 386, 391, 755, 762
Reflectance spectra 751
Reflection 27

Schottky barrier 519
Scintillation 7, 791
Scintillation process 460
Scintillation properties 287
Scintillator 651, 815
Scintillator efficiency 162
Second harmonic generation 226
Self-assembled quantum dots 67, 623
Self-frequency doubling 395
Self-trapped exciton 220
Self-trapping 663
Self-trapping of excitons 363
Semiconductors 85, 327, 338
Sensitization 48
Silicon nanocrystals 487
Simulation 182
Single molecule 581
Singlet oxygen phosphorescence 313
Site selective spectroscopy 201
Soft modes 536
Sol–gel 391, 504, 608
Sol–gel glasses 243
Solvation 295
Space vacuum 469
Spectral hole burning 151
Spectral trajectory 581
Spectroscopy 96, 253
Spinel crystal 590
Spin–orbit interaction 81
Stark splitting 819
Steady-state fluorescence 774
Stepwise up-conversion 715
Stillwellite 369
Stoichiometric 644
Stretched-exponential 510
Supersonic jet spectroscopy 273
Supramolecular systems 261
Surface losses 307
Surface magnetism 226
Synchrotron radiation excitation 176

Temperature 96, 762
Temperature dependence 705
Terbium complexes luminescence 243
Thermal quenching 162
Thermally stimulated luminescence 791
Thermoluminescence 77, 162, 562, 575, 614
Thermostimulated luminescence 460, 815
Thin films 469
Threshold current 782
Tight binding 487
Time-resolved fluorescence 774
Time-resolved luminescence 21, 349
Time resolved photoluminescence 1
Time-resolved spectroscopy 386
Topaz 349
Transition metal 112, 144, 373
Transition metal ion 608
Transparent ceramic 72
Traps 162
Triplet kinetics 313

Ultrafast phenomena 131
Ultrafast processes 125
Ultrafast rise time measurements 460
Upconversion 48, 112, 144, 373, 380, 504, 525, 737, 755, 762
Urbach rule 597
UV 173
UV radiation 469

VUV 211

Waveguides 201, 357, 391, 797
White light emission 455
Wide bandgap semiconductors 287
Wide-gap oxides 44

X-ray 768
X-ray diffraction 712
X-ray storage phosphor 369
Xe center 785

Materials Index

Al_2O_3 283, 307
Alkaline-earth titanate 586

Barium yttrium fluoride 481

Cadmium tungstate 498
CaF_2 239
CdS 138, 338
CdS-doped glass 614
CdTe 327, 623
Ce 635
Ce^{3+} 151
Cerium 426
Cr^{3+} 144, 253, 349, 536, 571, 699
Cr centres 657
CsI(Tl) 543
Cubic CdS 604
Cubic GaN 712
CuCl 629

Er 819
Er-doped Si 156
Er/Yb co-doping 525
Er^{3+} 201, 504, 694
Erbium 91
Eu^{3+} 243, 301
Eu^{3+} compounds 744
Europium 386, 426
Europium(II) 369

GaAs 519
GaInP 1
GaN 173
GaP 1
Gd_2O_3 333

Ho^{3+} 166
Ho:LuAG 737

KY_3F_{10} 169

Lanthanide 112
Lead tungstate 618, 688, 791
$LiCaAlF_6:Cr^{3+}$ 81, 283, 460
$LiNbO_3$ 201, 206, 248
Lithium fluoride 77
Lithium niobate 357, 525, 644
$LiYF_4$ 169
$LuPO_4$ 151

MgO 248, 253, 307
Mn^{2+} 34

Nanocrystalline Ge 557
Nanocrystalline Si 557
Nanophosphors 391
Naphthalene bichromophoric molecules 273
Naphthalic acid derivatives 119
Nd^{3+} 72
Nd/Yb:YAG nanocrystalline ceramics 438
Neodymium 101, 357
Ni^{2+} 380

Oxysulfide 7

$PbBr_2$ 663
$PbCl_2$ 663
$PbWO_4$ 651
Porous GaAs 712
Pr^{3+} 166, 176
